

MATRA-X User Manual

1. Access

Open <https://matra-x-vision-core.base44.app/> in a modern browser.

2. Command Center

Use the Command Center as the entry point. Review material status, standardization activity, exception indicators and cross-CPSE insight.

3. Material Catalog

Search and inspect CPSE organization, raw code, description, category, unit, standardized mapping and verification information.

4. AI Standardization

Open a material and review its proposed standardized representation. Inspect the technical fields and evidence before accepting a critical mapping.

5. Error Detection

Inspect duplicate, mismatch, anomaly, obsolete and non-standard conditions. Open the issue detail and review the reason before taking action.

6. Biometric Authentication

The current prototype models face, fingerprint and iris activity. For production, use device-backed WebAuthn/passkeys and do not store raw biometric images/templates.

7. LIORA

Ask focused questions about SIH26099, Engineering DNA, matching, technical conflicts, errors, legacy mapping, evidence, procurement, inventory and governance.

8. Review

Inspect source record → inspect technical fields → inspect evidence → inspect conflict state → approve, reject or escalate.

9. Counterfactual workflow

Change a critical parameter such as grade, dimension, pressure class or voltage and observe how the relationship decision changes.

10. SIH presentation order

Command Center → Material Catalog → AI Standardization → Error Detection → Match reasoning → Conflict guard → LIORA → Cross-CPSE Insights → Event trace.

11. Data discipline

Always distinguish REAL, PUBLIC, SYNTHETIC, SIMULATED and DEMO information.
